Sahin introduces the Viola xwilliamsiana Floral Power(r) Super Cream F1. This viola is claimed to be an earlier variety in the cream colour. Moreover, the plant fills the pot better and it has a vigorous growth.

Global Flowers has a new begonia, the Monza Rose which is part of a series. The varieties have a larger flower size and are early flowering. Another advantage is that the cultivation time is one week shorter in comparison to other series and it has a better garden performance. Besides rose, the series contains begonias in the colours red, coral, pink, and white.

Goldsmith Seeds

Goldsmith introduces a new series of Pansies called Mammoth. This name refers to the big flowers. The series is available in 11 colours. In North Western Europe the flowering period of the violas is September/October. The plants are stretch resistant under warm conditions, have strong branching and are claimed to be the most uniform extra large flowered Pansy series ever.

Big Kiss is a new series of Gazania which are bigger plants and also the flowers are bigger with a diameter of 10cm -12 cm. The colours are white flame and yellow flame. The flowers are really held above the foliage, which makes quite an impression at retail.

ing means that the brilliantly coloured leaves are the centre of attention. Long lasting colour is a plus for landscapers. Versa Rose to Lime (pictured) has a rose colour in the leaves which dissolves leaving green margins and a cream centre. Six uniquely patterned shades in the collection.

The Zinnia Zahara series, introduced to the market for 2009, is disease-tolerant, heat-loving and has 20% larger flowers in stronger colours than other Zinnia's of its type on the market. Zinnia Zahara Fire has a bright orange-red hue which intensifies outdoors. More flowers on every plant mean more colour per plant! Also new to the Zinnia Zahara series for 2010 is Zahara Starlight Rose.

With the Cora Cascade Goldsmith introduces a Vinca series with five colours with a hanging growing pattern. A big advantage of the series is that all colours are genetically resistant against aerial Phytophthora, which is a unique feature for Vinca. The flowers are super large and thick and the plants thrive in heat and humidity.
